

Resources Used:

- <https://reactjs.org/tutorial/tutorial.html>
 - Since I wanted to do more frontend oriented work for PollBuddy, I followed along with this React tutorial to get myself back up to speed with the syntax and utilization of this tool
- <https://www.tutorialspoint.com/expressjs/index.htm>
 - I just read up on this because a big portion of PollBuddy's source code uses express and I felt that if I am doing Frontend work I might as well know how other parts of the source code works
- <https://reactrouter.com/web/guides/quick-start>
 - One of my issues involved reformatting old redirects and this was based on React routing. I saw a lot of routing components which I then decided to learn up on using this guide. As a result, I was able to tackle this issue with ease after understanding how redirects work.
- <https://www.docker.com/101-tutorial>
 - To start up the PollBuddy development environment, you needed to have docker running. I used this tutorial as a basis of understanding how docker containers and volumes worked.
- Poll Buddy Wiki
 - I referred to the PollBuddy Wiki for how to build the program and how to contribute properly to GitHub.
